FROM AUSTRALIAN FARMERS.

FEEDING GUIDE

Feed to appetite to growing calves up from 12 weeks of age onwards.

Provide straw or hay as a roughage source.

Feed to growing heifers, at a rate equivalent to 1/4 to 2% of live-weight (0.25 – 2 kg per 100 kg live-weight), according to forage availability and quality until 3 - 4 weeks prior to calving. Aim for steady growth rates, avoiding extended periods of weight loss or rapid gain.

Ensure fresh, clean drinking water is available.

Follow on from Barastoc Calf Rearer Pellets or Barastoc Calf Meal, over a 3-day period, from 12 weeks of age. Introduce Barastoc Lead Up Pellets 2 to 3 weeks prior to calving.
